

ORIGIN AURA

Automated Universal Recruitment Analyzer

Moving Beyond Keyword Matching to True Contextual Talent Evaluation

Developers: Nandhan M (Systems Developer)

Organization in future: ORIGIN (Organization for Robotics, Intelligence & Next-Gen Systems)

Why Legacy ATS Fails Elite Talent

[!] The Legacy Keyword Trap

- Traditional Applicant Tracking Systems (ATS) rely on primitive, rigid string-matching regex filters.
- The 'SLAM' Trap: If a job profile requires 'SLAM' and an elite applicant writes 'Built autonomous spatial mapping networks,' standard systems drop them instantly.

[✓] The Systematic Consequence

- Massive applicant volumes force recruiters to rely on shallow filtering, burying high-signal, multidisciplinary engineering talent in the noise.
- AURA reads profiles like a human technical lead—evaluating contextual capability and domain skill instead of raw vocabulary matching.

The Hybrid Scoring Logic Matrix

01 / Semantic Layer

Leverages the all-MiniLM-L6-v2 transformer engine to map full-text descriptions and candidate arrays into dense vector spaces. Uses cosine similarity to target core technical intent over direct keywords.

Weight: 70%

02 / Timeline Layer

Applies a localized mathematical deviation scaling matrix to cross-examine chronological target parameters without imposing terminal constraints on highly exceptional outlier talent.

Weight: 30%

03 / Matrix Fusion

Programmatically fuses the vector distance calculations with timeline deviation values to construct a unified, completely transparent Total AURA Score out of 100 for final placement.

Output: Live Leaderboard

The AURA Insights Engine

- Translating Vectors to Veracity: Raw quantitative evaluation percentages alone fail to build critical administrative or user trust.
- Feature Verification: The insight runtime parses intersecting semantic clusters to explicitly reveal why a candidate earned their specific placement rank.

```
aura-engine-node --verbose  
> Generating context summary...  
  
"Elite alignment: Exceptional  
structural grasp of ROS2 and Edge  
AI systems with optimal seniority  
timeline placement."
```

Production-Ready Recruiter Canvas - 1

- High-Contrast Terminal UX: Styled with a dark mode terminal configuration to eliminate visual exhaustion across extended screening pipelines.
- Visual Signal Grids: Employs dynamic scoring status badges (Premium Green for Top Alignment, Alert Orange, and Critical Red) allowing recruiters to screen cohorts of 100+ candidates in under 5 seconds and may more.
- Frictionless Data Portability: Features a seamless one-click export system that instantly structures, locks, and writes the evaluated cohort matrix directly into a standardized submission-ready CSV spreadsheet.

Production-Ready Recruiter Canvas - 2

RANK	CANDIDATE NAME	EXPERIENCE (YRS)	AI SEMANTIC MATCH	EXPERIENCE MATCH	TOTAL AURA SCORE	AURA INSIGHT
1	Arjun Nair	8	73%	70%	72.0	Strong conceptual match with deep technical exposure highlighting EDGE, ENGINEER proficiencies.
2	Meera Pillai	5	49%	100%	64.6	Moderate match; displays baseline exposure to ROS2, COMPUTER but requires alignment fine-tuning.
3	Aarav Sharma	6	51%	90%	62.7	Ranked primarily on solid seniority foundation; technical exposure to ROS2, C++ acts as a secondary buffer.
4	Gautam Joshi	7	53%	80%	61.3	Ranked primarily on solid seniority foundation; technical exposure to EDGE, C++ acts as a secondary buffer.
5	Yash Gowda	4	49%	90%	61.2	Moderate match; displays baseline exposure to EDGE, C++ but requires alignment fine-tuning.
6	Tanvi Bhatt	3	52%	80%	60.5	Moderate match; displays baseline exposure to ROBOTICS, EDGE but requires alignment fine-tuning.
7	Isha Deshmukh	4	47%	90%	59.7	Moderate match; displays baseline exposure to ENGINEER, COMPUTER but requires alignment fine-tuning.
8	Pranav Anand	6	45%	90%	58.3	Moderate match; displays baseline exposure to C++, DEEP but requires alignment fine-tuning.
9	Nisha Agarwal	4	45%	90%	58.2	Moderate match; displays baseline exposure to ENGINEER, ROS2 but requires alignment fine-tuning.
10	Madhavan R	6	44%	90%	57.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
11	Divya Iyer	5	39%	100%	57.3	Critical contextual divergence; missing core technology proficiencies required for deployment.
12	Amrita Rao	5	39%	100%	57.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
13	Sanku Butta	6	38%	100%	56.7	Critical contextual divergence; missing core technology proficiencies required for deployment.

Production-Ready Recruiter Canvas - 3

12	Amrita Rao	5	39%	100%	57.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
13	Sanjay Dutt	5	38%	100%	56.7	Critical contextual divergence; missing core technology proficiencies required for deployment.
14	Siddharth Roy	9	55%	60%	56.5	Ranked primarily on solid seniority foundation; technical exposure to EDGE, ROS2 acts as a secondary buffer.
15	Harsh Vardhan	5	38%	100%	56.3	Critical contextual divergence; missing core technology proficiencies required for deployment.
16	Hari Krishnan	3	44%	80%	54.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
17	Pooja Reddy	4	39%	90%	54.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
18	Rohan Das	3	43%	80%	53.8	Critical contextual divergence; missing core technology proficiencies required for deployment.
19	Tulsi Kumar	2	47%	70%	53.7	Moderate match; displays baseline exposure to ENGINEER, VISION but requires alignment fine-tuning.
20	Pradeep Kumar	3	42%	80%	53.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
21	Nikhil Saxena	8	46%	70%	53.4	Moderate match; displays baseline exposure to C++ but requires alignment fine-tuning.
22	Utkarsh Mishra	6	37%	90%	53.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
23	Aniket Joshi	3	41%	80%	52.4	Critical contextual divergence; missing core technology proficiencies required for deployment.
24	Riya Sen	7	40%	80%	51.9	Critical contextual divergence; missing core technology proficiencies required for deployment.
25	Vansh Kapoor	5	30%	100%	50.8	Critical contextual divergence; missing core technology proficiencies required for deployment.

Production-Ready Recruiter Canvas - 4

26	Kunal Shah	6	32%	90%	49.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
27	Vidya Balan	4	31%	90%	49.0	Critical contextual divergence; missing core technology proficiencies required for deployment.
28	Alok Nath	7	35%	80%	48.5	Critical contextual divergence; missing core technology proficiencies required for deployment.
29	Tarun Verma	12	56%	30%	47.9	Ranked primarily on solid seniority foundation; technical exposure to ROBOTICS, ENGINEER acts as a secondary buffer.
30	Anusha Shetty	6	29%	90%	47.0	Critical contextual divergence; missing core technology proficiencies required for deployment.
30	Jatin Malhotra	9	41%	60%	47.0	Critical contextual divergence; missing core technology proficiencies required for deployment.
32	Sneha Mitra	4	28%	90%	46.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
32	Bhavana Patel	4	28%	90%	46.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
34	Chirag Verma	2	35%	70%	45.7	Critical contextual divergence; missing core technology proficiencies required for deployment.
35	Vivek Oberoi	8	35%	70%	45.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
36	Neha Kulkarni	2	34%	70%	44.9	Critical contextual divergence; missing core technology proficiencies required for deployment.
37	Suresh Raina	5	21%	100%	44.4	Critical contextual divergence; missing core technology proficiencies required for deployment.
38	Rashmi Desai	7	29%	80%	44.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
39	Ananya Pandey	2	32%	70%	43.1	Critical contextual divergence; missing core technology proficiencies required for deployment.

Production-Ready Recruiter Canvas - 5

39	Ananya Pandey	2	32%	70%	43.1	Critical contextual divergence; missing core technology proficiencies required for deployment.
40	Eshwar Prasad	12	48%	30%	42.6	Moderate match; displays baseline exposure to ROBOTICS, C++ but requires alignment fine-tuning.
41	Jyoti Kumari	2	27%	70%	40.1	Critical contextual divergence; missing core technology proficiencies required for deployment.
42	Aditi Rao	3	22%	80%	39.3	Critical contextual divergence; missing core technology proficiencies required for deployment.
43	Kavya Hegde	1	29%	60%	38.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
44	Ashwin Kumar	4	16%	90%	37.9	Critical contextual divergence; missing core technology proficiencies required for deployment.
45	Pankaj Mishra	10	32%	50%	37.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
46	Deepak Chaurasia	9	26%	60%	36.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
47	Karan Johar	8	20%	70%	35.0	Critical contextual divergence; missing core technology proficiencies required for deployment.
48	Varun Dhawan	11	32%	40%	34.2	Critical contextual divergence; missing core technology proficiencies required for deployment.
49	Gayatri Devi	3	11%	80%	31.9	Critical contextual divergence; missing core technology proficiencies required for deployment.
50	Shreya Ghoshal	2	14%	70%	30.6	Critical contextual divergence; missing core technology proficiencies required for deployment.
